

STREAMETH

The open video CMS

Pablo Voorvaart

It's a self hosted application that event organizers can use to host their virtual events

Stream, schedule, record

Livestream to multiple rooms concurrently

Failover

Streameth is provider agnostic

Livepeer is the out of the box video provider but you can choose your own

Streameth integrates with different schedule providers so that event organizers can easily add or remove session

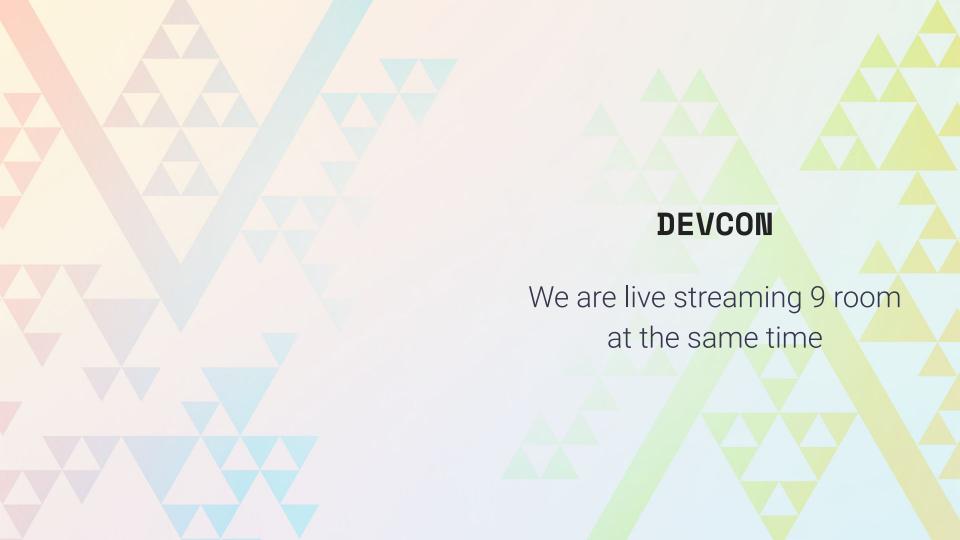

On demand video playback

Show the recorded content on each session page

Extend the functionality of the application

Integrate with other protocols

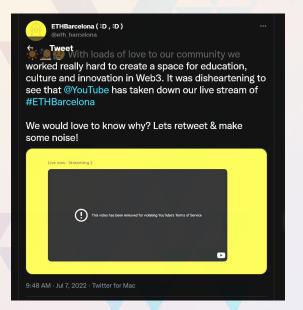

Web3 events are being broadcasted using centralized providers
